

White Crystalline Antibiotics Powder 1-T Test Cyp Dhb Cas 65-06-

5

Our Product Introduction

for more products please visit us on bodybuild-supplement.com

Basic Information

- Place of Origin: China
- Minimum Order Quantity: 10Grams
- Price: USD
- Packaging Details: 1kg/Foil Bag
- Delivery Time: 3-7days after received payment
- Payment Terms: T/T, Western Union, PayPal
- Supply Ability: 5000KG Per Year

Product Specification

- Product Name: DHB
- Cas: 65-06-5
- Appearance: White Powder
- Purity: 99%
- Usage: Bodybuilding
- Highlight: **White Crystalline Antibiotics Powder, Dhb Powder, Cas 65-06-5**

Product Description

White Crystalline Antibiotics Powder 1-T Cypionate (Test Cyp) Dhb

Basic Information Form Of 1-Test Cypionate (Test Cyp) Dhb

Product name	1-T cypionate Powder
Appearance	crystalline powder
Color	White
Melting Point	101-102°
CAS no.	65-06-5
Assay Percent Range	99%
Usage	promote weight loss
Molecular weight	302.41
Storage Condition	2-8°C

Details of 1-T Ciproionate Powder

Dihydro-testo powder, often referred to as 1-test powder. This compound that lacks 5-alpha reduction allows the user to administer it without suffering the negative side effects associated with this chemical reaction but also eliminates the benefits as well. Boldenone is not the only that has similarities with dihydro-bodipropion. In fact, dihydro prednisolone is chemically identical to the drug men prone, except for the 1-methylation of men prone. Of course, the 1-methylation was added to menadione to make it more readily available when taken orally, so dihydro-bodipropion is not effectively utilized when taken orally, although it was once sold over the counter in tablet and pill form. Over-the-counter formulations of some of these drugs are accomplished using a delivery system similar to Andriol, i.e., the production of an oil-soluble product from dihydro-butyrophenone. However, this is still not a relatively worthwhile delivery system to use if one wants to maximize the compound's potential. Intramuscular injection is by far the most effective method of administration and is used as with most anabolic.

1-Testo Cypionate (Test Cyp) Dhb Powder Shelf Life and Storage Tips

Testo cypionate powder has a shelf life of three to four years if stored properly. Upon receipt, testo cypionate powder must be stored at a controlled room temperature of 20° to 25°C (68° to 77°F) with an allowable excursion of 15° to 30°C (59° to 86°F) and away from unauthorized use, pets, sunlight, moisture, and children.

In the case of expired Testo Ciproionate powder, injections, or injections no longer in use, Testo Ciproionate should be discarded after discussing with your pharmacist or local waste disposal company how to safely discard Testo Ciproionate. It is strongly recommended that testo cypionate not be flushed down the toilet or poured down the drain unless specifically recommended by a qualified agency.

General Information on Testo Dihydroepi / 1-Testo Cypionate Powder

Testo 1-Cyclopentylpropionate is a relatively new AAS product on the market and its popularity has increased considerably. However, since the demand for this product outweighs the supply, there is a lack of reviews on the performance of this product, post-injection pain (PIP), and suitability for AAS users who are looking to adjust their aesthetic reputation in an unusual/unconventional manner. Therefore, in an effort to increase my understanding of this product (1-testo cypionate), I created a review based on my personal experience with injections.

Naturally, many hardcore athletes have adopted 1-testo as a parental (injectable) preparation. Those who have access to 1-testo esters such as decanoate or cypionate achieve optimal anabolic results due to improved pharma kinetics. Most users of properly prepared sterile products (pyrogen-free) report significant hardening of muscle tissue, increase in lean tissue, and decrease in fat at a total weekly dose of 200-300 mg. Another surprising phenomenon is the significant increase in functional strength. Many people compare the effects of Testo Ciproionate to those of Tren. I have noted this, but it also suggests that tren also has potential negative side effects. I would suggest that the results of this type of application more closely resemble the use of higher doses of primidone acetate with better overall sclerotic value.

As for the duration that 1-testo cypionate/dihydro-butenone can run, due to the mild nature of the drug, extended use of the compound can be accomplished with little to no serious complications appearing along the way. There is no major problem of hepatotoxicity or severe renal stress, and its effects on other important health indicators such as blood pressure are mild in most users.

As for the specific dose of testo cypionate to be used, the low end is primarily considered to be three hundred to four hundred milligrams per week for male users. Like all drugs, this number will vary from user to user and will also depend on how dramatic of an effect the user wants to achieve with this drug. As for the highest dose worth trying for users, this also depends on a number of variables. For some users, a dose of one gram per week is not uncommon, while others try doses that exceed that number. It will always come back to how much a person is willing to administer and at what point the positives of increasing the dose begin to be outweighed by the negatives.

As mentioned earlier, 1-testo cypionate/dihydro-butenone does not aromatize, so estrogenic side effects, such as gynecological inflammation and water retention, are not a concern for users. This is partly due to the drug's inability to reduce 5 alpha. Also, androgenic side effects are very minimal for most users because there is little to no pathway for these side effects in terms of the drug's properties. These side effects include acne and hair loss, among others, although it appears to have the potential to cause prostate enlargement. This potential for prostate enlargement is actually similar in frequency and severity to that of testo propionate.

The other common negative effects associated with the use of anabolic/androgenic remain relatively mild with the use of dihydrotesto. Of course, like all, the user's natural testo production is suppressed, but other side effects such as increased blood pressure, acne, and others side effects are relatively mild and often absent in users, or at least they are directly related to the administration of this drug.

Package and Shipping Of 1-TestoCypionate (Test Cyp) Dhb

Under 25kg: inner: A PE bag in an aluminum foil bag; Above carton

Over 25kg: inner: Double PE bags; Outside 25kg/fiber drum

Within 3-5 days after your payment

FAQ Of 1-Testo Cypionate (Test Cyp) Dhb

Q1: Do you Accept Sample Orders?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit cards?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase a larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportation, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, etc.
