#### Product Function

PRL-8-53 is a nootropic research compound first synthesized in the 1970's by Dr Nikolaus Hansl while working at Creighton University, the single study involving humans showed PRL-8-53 improved word recollection scores both 24 and 96 hours after initial memorization. Given the low amount of evidence available for this nootropic, we thought it relevant to reference a journal article in which the creator discusses the compound and numerous other human trials it was used in.
