Basic Information

- Place of Origin: China
- Minimum Order Quantity: 10Grams
- Price: USD
- Packaging Details: 1kg/Foil Bag
- Delivery Time: 3-7days after received payment
- Payment Terms: T/T, Western Union, PayPal
- Supply Ability: 5000KG Per Year

Product Specification

- Product Name: Rivastigmine Tartrate
- Cas: 129101-54-8
- Appearance: White Powder
- Purity: 99%
- Usage: Parkinson's Disease
- Highlight: **Parkinson Rivastigmine Tartrate,
Dementia Rivastigmine Tartrate, 129101-54-8**

Product Description

Parkinson's Disease Use Dementia Rivastigmine Tartrate 129101-54-8 Raw Materials Powder

Detailed Product Information

Product Name: Rivastigmine tartrate
 Trade Name: Exelon
 CAS No.: 129101-54-8
 Molecular Formula: C₁₈H₂₈N₂O₈
 Molecular Weight: 400.42g/mol
 Purity : 99.5% HPLC
 Appearance: White powder
 Standard Packing : 100g, 1kg, 25kg
 Typical use : Alzheimer's disease
 Shelf Life : 2 years
 Storage: Refrigerator away from light

Description:

Rivastigmine (Exelon) is approved to prevent or slow the symptoms of mild to moderate AD or mild to moderate Parkinson's dementia. Rivastigmine is a parasymphomimetic or cholinergic agent for the treatment of mild to moderate dementia of the Alzheimer's type and dementia due to Parkinson's disease. The drug can be administered orally or via a transdermal patch; the latter form reduces the prevalence of side effects, which typically include nausea and vomiting. The drug is eliminated through the urine, and appears to have relatively few drug-drug interactions.

Typical Properties:

*Anti-Dementia of the Alzheimer's type and dementia due to Parkinson's disease

Related Products :

Below are examples of the drugs most commonly prescribed to prevent or slow the development of AD symptoms. How effective these drugs are can vary from person to person. All of these drugs also become less effective over time as AD becomes gradually worse.

Donepezil (Aricept): This drug is used to delay or slow the symptoms of mild, moderate, and severe AD. It comes in a tablet or disintegrating tablet.

Galantamine (Razadyne): This drug is used to prevent or slow the symptoms of mild to moderate AD. It comes as a tablet, extended-release capsule, or oral solution (liquid).

Memantine (Namenda): This drug is sometimes given with Aricept, Exelon, or Razadyne. It's used to delay or slow the symptoms of moderate to severe AD. It comes in a tablet, extended-release capsule, and oral solution.

Rivastigmine (Exelon): This drug is used to prevent or slow the symptoms of mild to moderate AD. It comes in a capsule or extended-release transdermal patch.

Memantine extended-release and donepezil (Namzaric): This drug capsule is used to treat moderate to severe AD. It's prescribed for certain people who take donepezil and who have not had bad reactions to the ingredients. No evidence suggests that it prevents or slows underlying disease process.
