Brief Introduction of Sermorelin

Sermorelin, the markets leading Growth Hormone Releasing Peptide (GHRP) is an excellent alternative to therapy. Sermorelin is a synthetic peptide whose brand name is Geref or Gerel. It is an analogue of growth hormone releasing hormone or GHRH. The main goal is to stimulate the release of growth hormone from the pituitary gland. Sermorelin's discovery can be traced back to at least the 1980s and since then has been used as a way to diagnose growth hormone deficiency.

Peptides, specifically Sermorelin, trigger your body's natural production rather than replacing your own with bio-identical hormones, which is a cheaper alternative to therapy. Growth hormone-releasing peptides naturally occur in your body. We just give you a little boost to help you along on your journey to total health and wellness.

Peptides are amino acid chains that help the body perform basic functions. From cell renewal to the production of growth hormones, peptides are little linked chains that can make or break how your body responds to a variety of treatments. With healthy production as a result of Sermorelin, your body will be healthy and vital as ever (if not stronger!).

Functions:

- Increases the development of lean body mass through the development of new muscle cells.
- Reduces body fat through lipolysis.
- Increases energy and vitality.
- Increases strength.
- Increases endurance.
- Accelerates healing from wounds or surgery.
- Strengthens the heart.
- Enhances the immune system.
- Improves sleep quality.
- Increases calcium retention, and strengthens and increases the mineralization of bone or bone density.
- Increases protein synthesis and stimulates the growth of all internal organs except the brain.
