Description

Methenolone acetate, or metynolone acetate, is an and anabolic (AAS) drug that is primarily used to treat anemia caused by bone marrow failure. Although it has been widely used in the past. Another related drug, metylenolone, is given by intramuscular injection.

Side effects of metenolone acetate include virilization symptoms such as acne, increased hair growth, and voice changes. The drug is a synthetic and anabolic, and therefore an agonist of the receptor (AR), the biological target of such as and dihydro(DHT). It has moderate anabolic and weak effects, and no effects or risk of liver damage. Metynolone resistance is a metynolone ester, a prodrug of metynolone in vivo.

In 1961, metenolone acetate was introduced for medical use. In addition to medical uses, metenolone acetate is also used to improve physical fitness and performance.

Application

Methenolone Acetate is commonly used by those who wish to minimize - and -related side effects. Methenolone Acetate is also a popular choice for cutting cycles, and due to its mild anabolic properties, may be best for maintaining muscle tissue on a strict pre-weight diet.

Excess subcutaneous fluid would also not be a problem since Methenolone Acetate is a non-aromatizing. The compound can also be added to bulking cycles to enhance the anabolic nature of the cycle while minimizing overall and side effects. -related side effects are usually limited to sensitive individuals, or those who choose to take high-dose products. Generally considered a safe compared to other products, Methenolone Acetate is a very popular product and this is reflected in its cost.

Usage

Methenolone acetate is an oral tablet medicine. It is important to take exactly the dose prescribed or directed by your pharmacist. In order not to increase the incidence of side effects, it is not recommended to take larger doses of Methenolone acetate than indicated. In order to benefit from Methenolone acetate treatment, it is essential to follow a high protein and high calorie diet. For any specific information, please contact your doctor or ask your pharmacist.

In order to get a dosage prescription suitable for your situation and desired effect, it is advisable to consult a doctor. The number of tablets taken per day, the time between doses, and the number of doses depend on the patient.
