Our Product Introduction

## Purity 99% Deflazacort Raw Powder For Anti-Inflammatory CAS 14484-47-0

### Product introduction

Product name	Deflazacort
CAS No.	14484-47-0
MF	C25H31NO6
MW	441.52
EINECS No.	238-483-7
Storage	2-8°C
Boiling Point	595.4±50.0 °C(Predicted)
Melting Point	255-256.5°C

### Description:

Deflazacort is a that is used to treat Duchenne muscular dystrophy in adults and children at least 2 years old. Deflazacort is not a cure for muscular dystrophy, but deflazacort may improve muscle strength and slow the progression of disability. Deflazacort may also be used for purposes not listed in this medication guide.

#### Side effects:

Get emergency medical help if you have signs of an allergic reaction (hives, difficult breathing, swelling in your face or throat) or a severe skin reaction (fever, sore throat, burning eyes, skin pain, red or purple skin rash with blistering and peeling).

Call your doctor at once if you have:

fever, chills, sore throat, weakness;

severe or ongoing diarrhea;

any skin rash, no matter how mild;

blurred vision, tunnel vision, eye pain, or seeing halos around lights;

swelling in your hands, feet, or lower legs;

severe muscle weakness;

decreased adrenal gland hormones--weakness, diarrhea, nausea, menstrual changes, skin discoloration, craving salty foods, and feeling lightheaded;

increased adrenal gland hormones--weight gain in your face and upper back, slow wound healing, skin discoloration, acne, thinning skin, increased body hair, tiredness, mood changes, menstrual changes;

high blood sugar--increased thirst, increased urination, dry mouth, fruity breath odor; or

low potassium level--leg cramps, constipation, irregular heartbeats, fluttering in your chest, increased thirst or urination, numbness or tingling, muscle weakness or limp feeling.

Deflazacort can affect growth in children. Tell your doctor if your child is not growing at a normal rate while using deflazacort. Common side effects may include:

increased appetite;

weight gain;

increased growth of body hair; sleep problems;

cold symptoms such as stuffy nose, sneezing, sore throat, cough;

frequent urge to urinate; or

changes in the shape or location of body fat (especially in your face and back).
