

CAS 151-73-5 Chemical Raw Materials API Bentelan Betamethasone Sodium Phosphate

Our Product Introduction

Basic Information

- Place of Origin: China
- Minimum Order Quantity: 10Grams
- Price: USD
- Packaging Details: 1kg/Foil Bag
- Delivery Time: 3-7days after received payment
- Payment Terms: T/T, Western Union, PayPal
- Supply Ability: 5000KG Per Year

Product Specification

- Product Name: Betamethasone Sodium Phosphate
- Cas: 151-73-5
- Appearance: White Powder
- Purity: 99%
- Usage: Adrenocorticotrophic Hormone
- Highlight: **151-73-5 Chemical Raw Materials, Bentelan Chemical Raw Materials, Betamethasone Sodium Phosphate**

Product Description

CAS 151-73-5 API Bentelan Betamethasone Sodium Phosphate Raw Powder

Description:

Betamethasone sodium phosphate is an adrenocorticotrophic hormone drug, and its main dosage forms include injections and drops. This product has high water solubility and is suitable for first aid. Drops are used to treat allergic inflammation of the eyes, ears, nose, and skin. It is suitable for the treatment of eczema, contact dermatitis, neurodermatitis, solar dermatitis and senile pruritus.

Betamethasone is a potent glucocorticoid with anti-inflammatory and immunosuppressive properties. Unlike other drugs with these effects, betamethasone does not cause water retention. It is given as a topical cream, ointment, foam, lotion, or gel to treat itching. Betamethasone sodium phosphate is sometimes given as an intramuscular (I.M) injection for itching caused by various conditions, including allergic reactions to poison ivy and similar plants.

Applications:

Betamethasone is a corticosteroid used as a topical cream to relieve skin irritation, such as itching and flaking from eczema.

It is used as a treatment for local psoriasis, as betamethasone dipropionate and salicylic acid, or as the combination betamethasone/calcipotriol.
