<b>CAS No.</b>	167933-07-5
<b>Molecular Formula</b>	C <sub>20</sub> H <sub>21</sub> F <sub>3</sub> N <sub>4</sub> O
<b>Molecular Weight</b>	390.4
<b>Appearance</b>	White Powder
<b>Assay</b>	99%
<b>COA</b>	Available

#### Product Description:

Flibanserin is used to treat low desire in women who have not gone through menopause and have never had low desire in the past. Flibanserin is for use only when low desire is NOT caused by a medical condition, a mental disorder, relationship problems, or by using drugs or other medicines.

Flibanserin is not for women who have already gone through menopause. flibanserin is also not for use by men.

Flibanserin is available only under a special program. You must be registered in the program and understand the risks and benefits of this medicine.

#### The Introduction of Flibanserin

Flibanserin works directly on the area of the female brain that controls pleasure, thereby restoring a woman's declining drive.

The effects of this drug are not immediate and need to be taken for a few weeks to get results. At the same time, female Viagra has some side effects, with one in eight women tested experiencing dizziness, fatigue and sleepiness.

Flibanserin is similar to antidepressants in that it affects chemicals secreted by the brain that are associated with mood and desire. In fact, it was used as a treatment for depression before it became an aid.

#### The Application & Function of Flibanserin

Flibanserin has shown affinity for 5-HT<sub>1A</sub> and 5-HT<sub>2</sub> receptors and is therefore still a promising therapeutic agent for the treatment of a variety of disorders, such as depression, schizophrenia, Parkinson's disease, anxiety disorders, sleep disorders, and psychiatric abnormalities, and age-related memory disorders.
